PROFESSIONAL SUMMARY

Senior SDET and QA Automation Architect with 16 years of engineering experience specializing in building scalable test infrastructure and embedding quality gates into CI/CD pipelines. Trilingual (English, Spanish, Portuguese) professional with a proven track record of migrating enterprise organizations to full automated regression using Playwright, TypeScript, and API contract testing (Pact). Recognized for reducing change failure rates and accelerating deployment frequencies across distributed global teams in the US, LatAm, and Brazil for the fintech, e-commerce, and banking sectors.

TECHNICAL SKILLS

Automation Frameworks: Playwright, Cypress, WebdriverIO, Selenium WebDriver, Appium, AccelQ, Karate DSL, Robot Framework, SilkTest.

Programming Languages: TypeScript, JavaScript, Java, Kotlin, Python, Go, C#, Dart, Ruby, Apex.

API & Integration: REST, gRPC, GraphQL, SOAP, Postman, RestAssured, Pact (Contract Testing).

CI/CD & Cloud Infrastructure: GitHub Actions, Jenkins, GitLab CI, Bitbucket Pipelines, AWS (S3, CloudWatch, EC2, Device Farm), Docker, Azure DevOps.

Performance & Data Quality: JMeter, K6, PySpark, Spark, SQL, Kafka.

Methodologies: E2E, Shift-Left, BDD, TDD, Quality Gates, DORA Metrics Optimization, Chaos Engineering, AI-Driven Testing.

PROFESSIONAL EXPERIENCE

OLAClick | Lima, Peru *SDET QA Automation Engineer (AI/ML)* | February 2026 – June 2026

- Migrated the organization from 100% manual testing to complete automated regression coverage, enabling immediate feedback cycles for Nuxt, Node.js, and Laravel architectures, by architecting a scalable test automation framework from scratch using Playwright and TypeScript .
- Eliminated deployment delays and testing bottlenecks, reducing staging environment setup time to zero exclusive dependencies, by integrating the automation framework into Bitbucket Pipelines using Infrastructure as Code (IaC) practices .
- Increased testing efficiency for critical API integrations, achieving a 100% coverage rate on defined Happy Paths without slowing down release cadences, by executing a risk-based "QA Decision Matrix" in collaboration with Product Leads .
- Improved bug report resolution speed and technical collaboration, establishing measurable tracking metrics across the engineering team, by developing and enforcing a standardized "QA Playbook" in Confluence and Jira .

UPWORK | San Francisco, United States (Remote) *Software Development Engineer in Test (SDET)* | December 2025 – February 2026

- Delivered high-reliability automated quality solutions for multiple global clients, successfully handing off complete E2E testing suites within stringent project deadlines, by designing custom test frameworks leveraging Playwright, Cypress, and microservices API testing .
- Optimized backend service reliability, identifying and mitigating critical latency bottlenecks before production deployment, by engineering advanced performance testing scripts using K6 .

DEUNA | New York City, United States (Remote) *Senior QA Automation Engineer* | October 2023 – October 2025

- Guaranteed high-quality continuous delivery for over 80 payment service providers, maintaining a near-zero defect escape rate in production, by developing and maintaining robust API and Web automated frameworks using Playwright and Go .
- Accelerated test case generation and improved overall code coverage, reducing manual configuration overhead, by implementing AI-Driven testing components and AWS cloud-based execution solutions .
- Elevated the quality engineering capabilities of the development team, reducing data pipeline errors, by providing hands-on training in test automation best practices, ETL design, and report interpretation using PySpark and Python .

TUL | Bogota, Colombia *Senior QA Automation Engineer* | May 2022 – July 2023

- Prevented breaking changes across microservices architectures, significantly reducing integration failures during deployment, by implementing consumer-driven contract testing with Pact and API testing using Kotlin and Java .
- Accelerated continuous integration pipelines, establishing reliable automated quality gates, by building and deploying test frameworks with Karate DSL, Cypress, and WebdriverIO integrated via Kafka and AWS .
- Improved cross-platform mobile quality, achieving stable automated coverage for the Flutter application, by implementing Dart-based testing protocols and BDD methodologies .

B89 | Lima, Peru *Senior Software Quality Engineer* | March 2020 – January 2022

- Scaled the quality assurance department for Peru's first neobank from the ground up, successfully onboarding a high-performing QA team, by designing the technical evaluation process and interviewing over 30 candidates .
- Secured the successful launch of the application MVP and backoffice modules, identifying zero critical vulnerabilities post-launch, by leading a comprehensive API and frontend automation strategy using Cypress and WebDriverIO .
- Validated the integrity of blockchain technology and remittance software, ensuring high-throughput transaction reliability, by engineering load testing scenarios with JMeter and contract validations with PactJs .

AVANTICA TECHNOLOGIES | Lima, Peru *Senior QA Automation Engineer* | January 2019 – March 2020

- Ensured zero data loss during critical system migrations for Scotiabank Canada and Peru, validating 100% of the required records, by leading the AS400 data extraction transformation testing .
- Certified the security and performance of the API Identity and Biometric Authentication (POK) project, passing all technical audits, by executing advanced performance testing and automated API scenarios .

EVERIS | Lima, Peru *QA Lead & QA Automation Lead* | May 2018 – December 2018

- Delivered the BCP Bank Salesforce project within stringent quality parameters, coordinating successful web and mobile application rollouts, by leading both Functional and Automation QA teams and designing custom test suites.

(Early career details spanning 2010 to 2018 at Choucair Testing, IATECAM/NCR Corporation, and FUCAPI involving automation, hardware diagnostics, and biometric tech testing are available upon request).

EDUCATION & CERTIFICATIONS

Bachelor of Computer Engineering, Universidade Paulista (UNIP), Manaus, Brazil (2009-2014)

International Diploma in Project Management, ESAN University, Lima, Peru (2018)

Certifications: ISTQB Advanced Test Automation Engineer Course (2025), ISTQB CTFL 4.0 Course, IBM Certified Specialist (Rational AppScan & Performance Tester), Playwright Web Automation & Framework Training, AI-Driven Cybersecurity, Docker DevOps.

Languages: Native Spanish, Advanced Portuguese, Intermediate English (B1/B2).
